

Meet your sub-4 hour RTOs for applications and data — contractually assured

Your most critical applications need higher levels of availability than what backup can provide. For these applications, Sungard Availability Services Recover2Cloud® for Server Replication is the right choice.

With R2C for Server Replication, full applications environments are recovered in less than four hours, guaranteed. Data and applications are restored to a near-zero recovery point. Applications restart without the delay and risk of a data restore process. Built-in asynchronous replication moves applications and data to the Sungard AS secure cloud. It combines

the scalability, pay-as-you-go pricing, and lower total cost of ownership you expect with the security you need for your most critical applications. This service is offered as a fully-managed Recovery-as-a-Service offering, which means that Sungard AS takes full responsibility for all of the steps required to assure the availability of your application.

Fully managed cloud recovery by Sungard AS at a lower cost and burden than doing it yourself

The Benefits of Recover2Cloud for Server Replication

Industry-leading 4-hour Service Level Guarantee

Sungard AS Recover2Cloud for Server Replication includes a Recovery Time Objective (RTO) of four hours or less. Sungard AS experts work with your team to audit your production environment, define your service requirements, and size your replication environment capacity accordingly. As a result, you gain defined specifications for replication, data retention, and application failover without the trial and error many organizations encounter.

Reduced Total Costs of Ownership

Because Recover2Cloud for Server Replication is backed by Sungard AS' fully secure enterprise-class cloud infrastructure, aggressive RTOs and failover are combined with the low cost and efficiency of the cloud.

- 25 – 40% lower operations cost compared to in-house solutions
- Scalable upon request to meet real-time capacity requirements
- Pay-as-you-go flexibility
- Eliminated or reduced need for in-house replication, failover, and recovery expertise

Fully Managed Recovery-as-a-Service Solution

Recover2Cloud for Server Replication is a fully managed solution. Sungard AS experts manage each stage of the replication and recovery process, including:

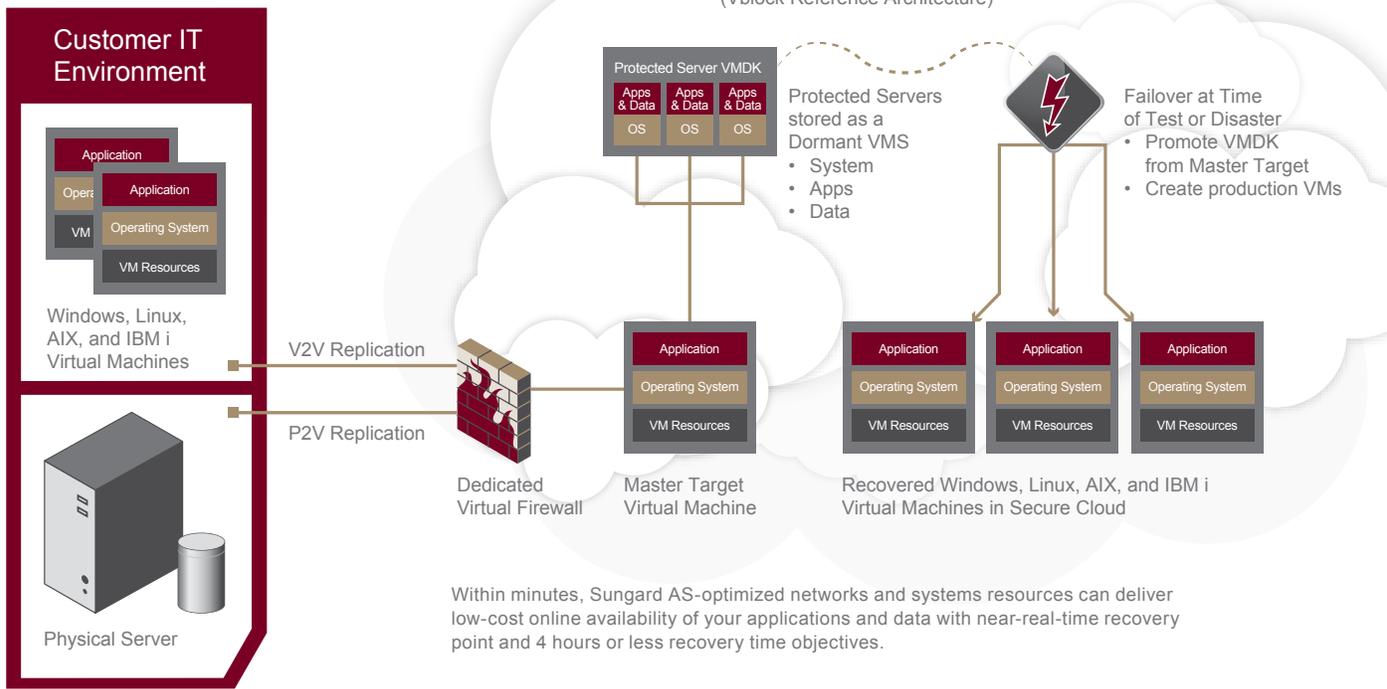

- Assistance with replication software installation
- Assistance with network sizing
- 24/7 monitoring and management of replication service and operations
- Actively managed recovery testing, twice annually
- Reconnection of business users after a disaster or other interruption
- Assistance with post-event failback to the customer site

Access to Secondary Infrastructure for Testing and Recovery

Sungard AS manages your second site infrastructure, so you avoid the additional cost and burden associated with secondary site systems and maintenance tasks. Sungard AS provides resources that allow for scalable growth of failover capacity.

The highest level of availability for your most critical applications

Key features

Unparalleled Application Availability: Asynchronous replication of customer servers, OS, application and data into Sungard AS' secure virtualization environment optimizes the availability of critical applications and data to those who need it.

Continuous Data Protection (CDP): Managed Cloud Failover Services leverage the advantages of disk-based data protection to provide application-aware recovery that can meet remote and local requirements. Recover2Cloud for Server Replication continuously capture data changes in real time as they occur and journal the changes in the Sungard AS Cloud. This allows recovery to any point-in-time within three days. Thus, if your application data is corrupted, failovers can happen to a point-in-time prior to the data corruption event.

Total System Replication: OS and application patching are things of the past, as Recover2Cloud for Server Replication replicates both OS and applications along with user data from your environment to the Sungard AS Cloud infrastructure.

Comprehensive Solution: End-to-end management provides a complete Recovery-as-a-Service solution, including implementation, activation, monitoring, management, problem resolution and reporting through the Sungard AS portal. Replication and failover features are monitored 24/7, so you can focus on running your business.

Unparalleled Support: Access to some of the industry's premier experts and infrastructure are provided along with the service, which are optimized to support secure virtualization and to provide a fully-managed replication and failover solution.

Secure cloud-based recovery that is fully managed and backed by service level agreements—[Sungard AS Cloud Based Recovery](#)

About Sungard Availability Services
Sungard Availability Services provides managed IT services, information availability consulting services, business continuity management software, and disaster recovery services.
