

SIMPLE, SECURE AND INTEGRATED DEPLOYMENT OF AWS RESOURCES

Managed Cloud – AWS from Sungard Availability Services (Sungard AS) enables the flexibility, scalability and reliability of the industry-leading AWS cloud within your hybrid IT environments without sacrificing the control, compliance and security your business requires.

Public cloud is driving big changes in the market today and providing a foundation for innovation and digital business transformation. Forrester estimates that by 2020 the public cloud market will reach \$235 billion.¹ Much public cloud use is driven by line-of-business and marketing and strategy leads, but CIOs and their IT organisations are increasingly expected to be in the driver's seat.

Amazon Web Services (AWS) is the cloud leader and has made it very easy for organisations to start using the AWS cloud. However, once your use of AWS expands, compliance and sprawl issues can become cause for concern. With Managed Cloud—AWS, Sungard AS provides you with the tools to provision AWS resources in a simple, secure, integrated model enabling cross-platform deployments meeting compliance, scalability, and availability requirements.

A COMMON MANAGEMENT TOOLSET

The benefits of public cloud are clear. But what happens when your organisation lacks control and visibility of your cloud resources? While the flexibility and scalability of public cloud provide a foundation for digital business transformation, it comes with the need for visibility, control and compliance. Managed Cloud—AWS provides enterprise support delivered through a common management toolset that solves the challenges of managing multiple AWS accounts.

- View, access, and manage all your AWS resources with a single set of credentials across test/dev and production environments
- New, self-management tool offers a consistent environment between test/dev and production workloads to simplify application deployment
- OS management from Sungard AS includes monitoring, patching, anti-virus and incident resolution for your critical workloads
- Operational support from Sungard AS ensures uptime of critical resources

SECURITY AND COMPLIANCE ARE CRITICAL

AWS provides the basic building blocks for configuration and compliance across your AWS accounts. Managed Cloud—AWS ensures these checks are enabled and enforced across every one of your AWS accounts and that they meet your security and compliance requirements.

- Gather data and keep tabs on provisioning activity in every account with native AWS Config and AWS CloudTrail tools
- Enable and apply best-practice architecture for your AWS accounts

- Enforce configurations globally, across your entire AWS deployment
- Built-in billing alerts make sure your team doesn't overspend

Build Resiliency into your AWS Environments with Cloud-based Recovery

Cloud Recovery—AWS addresses the specific needs of AWS users with a purpose-built, SLA-backed solution that focuses solely on managed backup and recovery using AWS.

- Use any AWS site as the recovery target. Protected sources can be a Sungard AS site, your site, Azure, or an AWS site
- Very low Recovery Time Objective (RTO) SLAs—as low as 2 hours
- Upfront cost reductions; customers pay for required resources ATOT/D plus a monthly fee
- No lower limit on the amount of data under protection

Sungard AS Consulting Services

Our consulting teams will work alongside your team to address the critical challenges you face, regardless of your organisation's size or industry. Our expertise and approach is further supported with a Sungard AS suite of flexible managed services and recovery solutions suited for complex, hybrid environments that are constantly coping with change. Our core strengths include:

- Managing complexity
- Reducing risk
- Protecting and evolving IT strategy and operations

It's our mission to help you improve the availability, security, recoverability and performance of your business, all while staying compliant with regulatory mandates.
