

Isolate your Data,
Protect your Business.

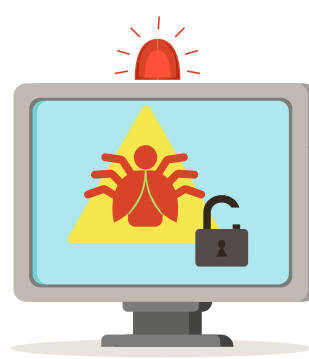

Did You Know?

It's estimated that cybercrime will cost approximately
\$6 trillion per year on average through 2021.¹

Advanced Persistent Threats

Sit on network undetected,
performing malicious activities

Ransomware

Locks files, holds
for payment

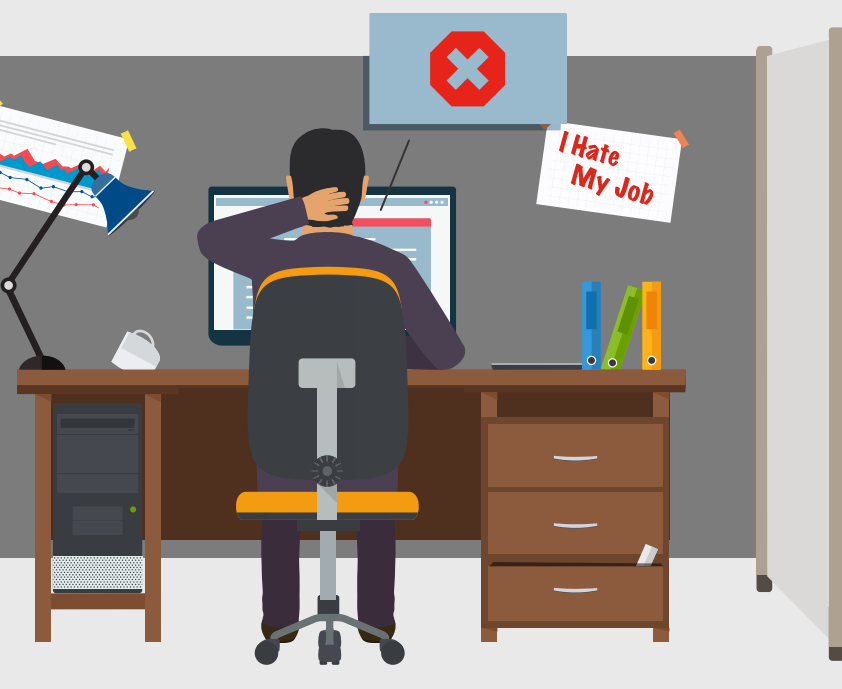

Hacktivists

Break into systems for
politically or socially
motivated purposes

The risks don't just come from
outside your organization

Phishing scams where employees
open infected emails, unwittingly
install malicious software

Disgruntled employee
destroying company data

Traditional security measures aren't enough

**Security tools cannot always detect
the new forms of cyberattacks.
And backup environments can
also be infected.**

**It's not just recovery that fails,
it's the business.**

Separate your data, secure your business

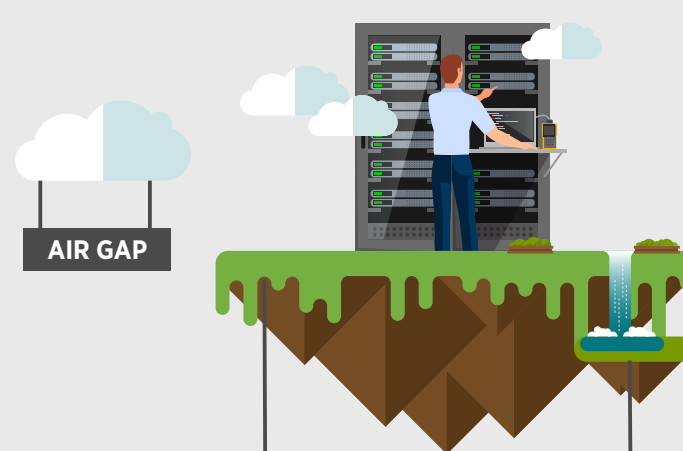

Isolated Recovery from Dell EMC
Separates your back up environment ...

Creates a **"gold
copy"** of your most
valuable data

**Stores data in a
vault** within a secure
Sungard AS data center

Creates an **"air gap"**
between your production
environment and the vault

Managed Recovery Program from Sungard AS

Helps auto discover
apps and supporting
infrastructure

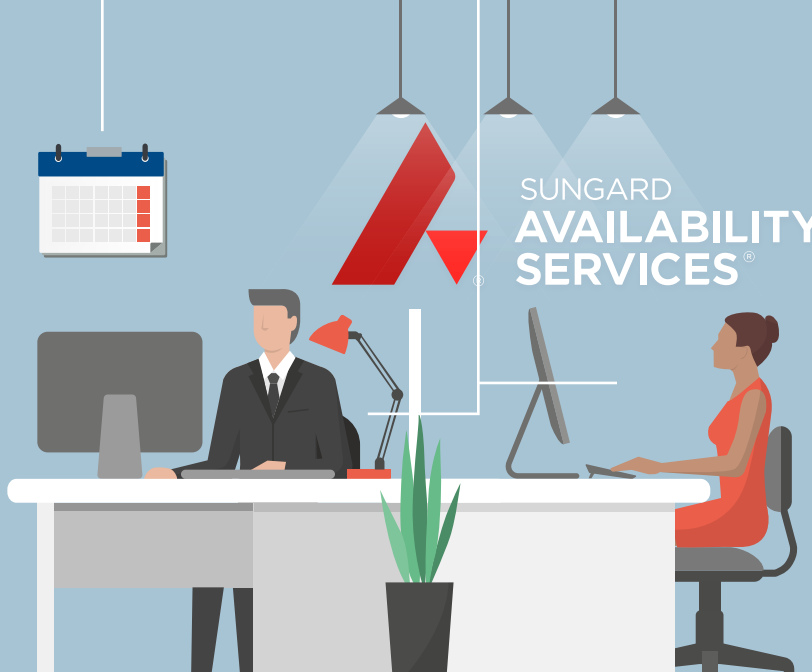

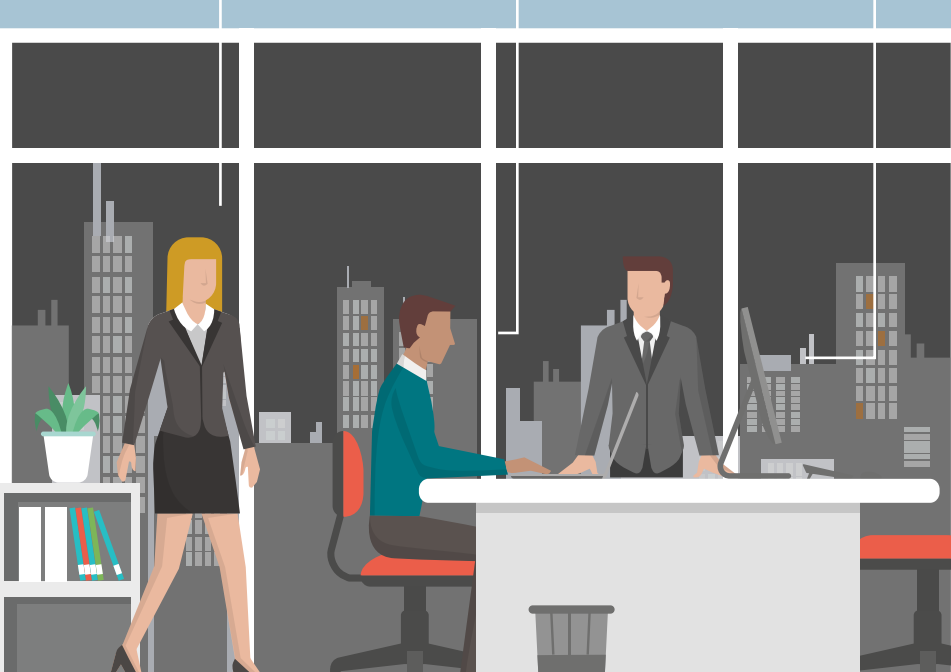

Conducts
regular testing

Creates a recovery
hot site, so you can
continue operations with
non-effected apps if
disaster strikes

Owns the
recovery process

Develops the
recovery run
books

Recovers your
environment, restoring the
gold copy backup to the
correct restore point

Divide and conquer

Now you can isolate your backup data from the rest to fight off cyber security threats
and recover fully. Find out more about Isolated Recovery from Dell EMC and Managed
Recovery Program from Sungard AS. Start secluding data and alluding threats today.
