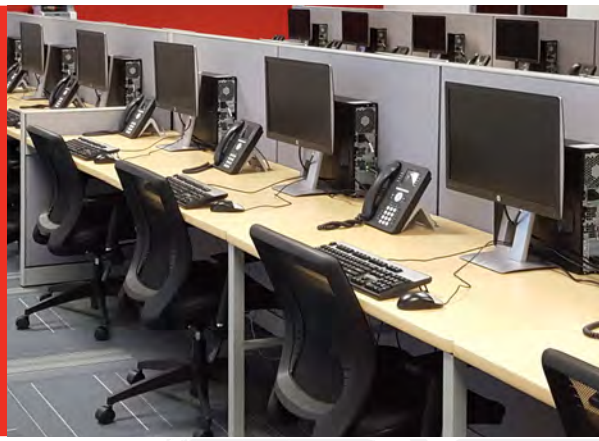
DALLAS FACILITY | GRAND PRAIRIE, TX

While weather and terrorist-related disruptions grab the headlines, your business is more likely to be impacted by every day events, such as power, utility, hardware and communications outages that make your usual workplace unavailable to employees.

Whether caused by major disasters or minor disruptions, Sungard AS Workplace Recovery Services provide a fully equipped, ready-to-use emergency office environment. As a result, you can be up and running in a matter of hours—not days or months—for resilient business operations.



Workplace recovery, your way

When your normal workplace is unavailable, you can meet both business and budgetary needs with these recovery options:

Dedicated Workplace Recovery Suites

If your customers expect high availability and you need to recover from an incident in the shortest possible time, you might opt for a Dedicated Workplace Recovery suite, designed to your precise specifications and solely for your exclusive use.

Shared Workplace Recovery Suites

Shared Workplace Recovery facilities provide customers with a highly cost-effective recovery solution when cost control, rather than continuous availability, is of paramount importance. With shared recovery provision, Sungard AS spreads the risk over a wider area, using a sophisticated operational risk management algorithm.

Mobile Workplace Recovery

When you can't reach us, we come to you. Our Mobile Workplace Recovery Services provide up to 250 workplace seats anywhere in the US or Canada. Sungard AS Mobile Recovery Units reach your site quickly, without special transport requirements and restrictions slowing them down - allowing your people to get back to work with minimal disruption. They can also support training and testing: at your recovery site, local site or any other location. The first Unit can be on its way within 24 hours.

Challenges

- Demand for high levels of business continuity for time-sensitive services
- Finding and funding alternate office space to resume business operations
- Complex telephony and IT infrastructures that are slow to recover

Benefits

- Productivity resumed within a few hours
- A safe, secure and compliant working environment
- No capex outlays for alternative space
- More cost-effective than DIY approaches
